

Objective

Code link

<https://github.com/Payal355-yadav/Alfido-Tech-Data-Analyst-Task-3-Open-Case-Optional-.git>

Analyse internship conversion funnel and identify major student drop-off points.

Findings

- Total Students: 1000
- Highest drop-off occurred between Application and Assessment.
- LinkedIn generated the highest number of successful interns.
- Data Analytics course showed the highest completion rate.
- Internship completion rate was approximately 20–30%.

Recommendations

1. Simplify assessment process.
2. Increase LinkedIn marketing campaigns.
3. Provide assessment preparation material.
4. Improve engagement for Web Development candidates.
5. Introduce automated reminders before assessments.

Screenshot of my project task

```
n = 1000

data = pd.DataFrame({
    'Student_ID': range(1, n+1),

    'Source': np.random.choice(
        ['LinkedIn', 'Instagram', 'Website', 'Referral'],
        n),

    'Course': np.random.choice(
        ['Data Analytics',
        'Web Development',
        'Python',
        'AI/ML'],
        n),

    'Gender': np.random.choice(
        ['Male', 'Female'],
        n),

    'Applied': np.random.choice(
        ['Yes', 'No'],
        n,
        p=[0.8, 0.2])
})

data['Assessment'] = np.where(
    data['Applied']=='Yes',
    np.random.choice(['Yes', 'No'],
        n,
        p=[0.3, 0.7])
    , 'No')
```
